NZEnvDS_Soil phosphorus v1.0

Title	NZEnvDS_Soil phosphorus
Creator	Manaaki Whenua - Landcare Research
Description	<p>New Zealand Environmental Data Stack (NZEnvDS) comprises a set of 72 spatial layers for environmental modelling and site characterisation. NZEnvDS includes the layers that informed the Land Environments of New Zealand (LENZ), additional layers generated for LENZ that were never publicly released, and additional layers generated since, all covering mainland New Zealand and surrounding inshore islands. The original/top copy of the dataset is available at (https://doi.org/10.7931/m6rm-vz40), but the layers are reproduced here for ease of access. See (https://newzealandecology.org/nzje/3440/) for a publication describing NZEnvDS. Differentiated into five classes ranging from “very low” (1) to “very high” (5). Generated as part of LENZ (Leathwick et al. 2002). Please cite the original paper as attribution when using these layers.</p>
